VEGETATION–CLIMATE REGRESSION MATRIX

Environmental Data Cube for Oglala Lakota

Ate Makoce | May–September 2000–2023 | 24 annual growing seasons

Each point represents one growing season. Regression lines are ordinary least-squares fits; shaded bands are model-based 95% confidence intervals for the fitted mean.

Correlations and regression lines describe associations, not causation or grazing effects. Annual observations may be temporally dependent.

Source: Annual EVI and NDMI validation series; gridMET precipitation and maximum temperature.
