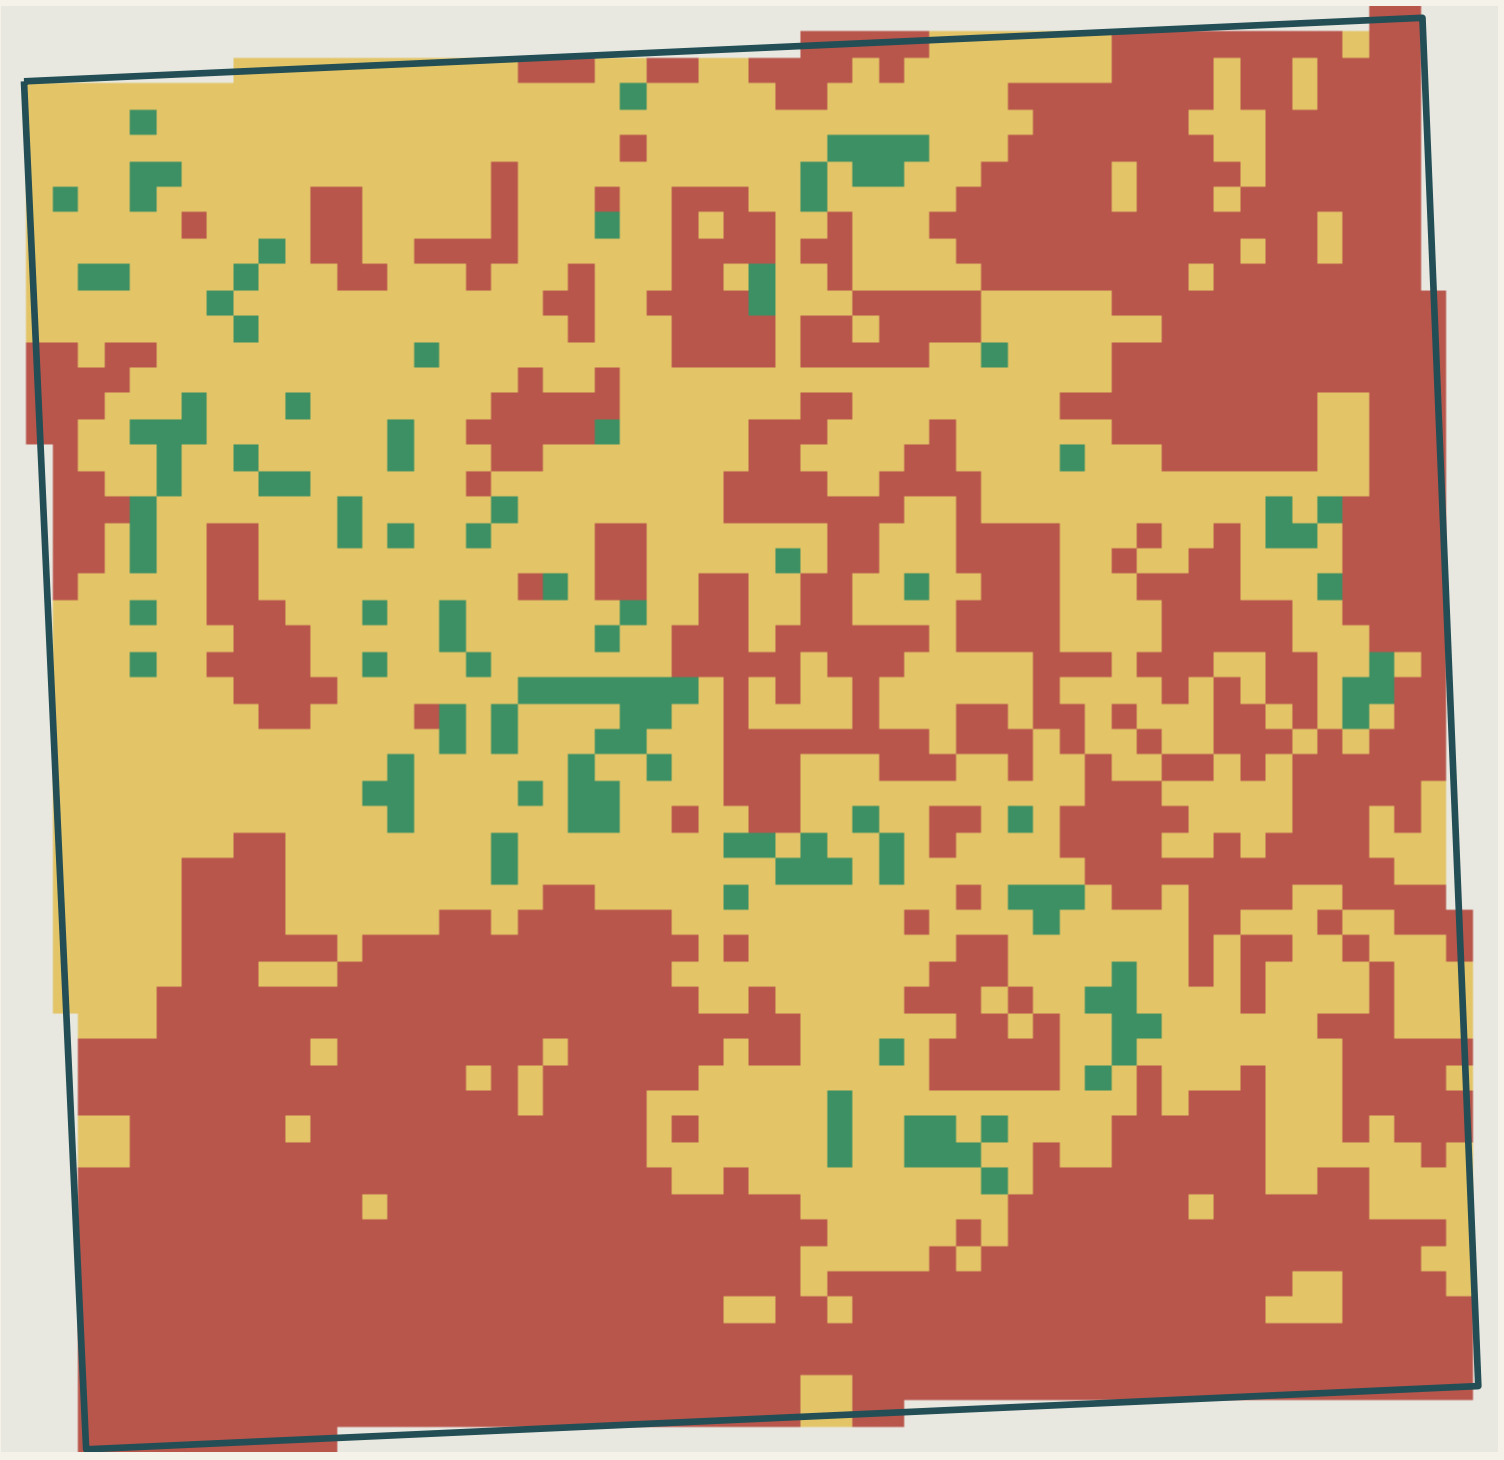
ENVIRONMENTAL DATA CUBE FOR OGLALA LAKOTA

HOW IS MY LAND DOING?

Ate_Macoke | Vegetation change from 2015 to 2023



WHAT DID WE FIND?

308 acres

Less green

303 acres

Little change

29 acres

Greener

About 71% of the less-green area was mapped as grassland/pasture in 2023.

Less green does not necessarily mean unhealthy land. Weather, grazing, fire, and other changes can affect vegetation.

Areas shown in red are places worth checking on the ground for plant cover, bare soil, erosion, and recovery.

Source: Landsat growing-season NDVI (May–September median), 2015 and 2023; USDA Cropland Data Layer 2023.

30 m pixels. Greenness change is not a direct measure of land health or proof of grazing impacts.
